

Function: Sharp tip and threads adapted for anchoring in wood. The threads grip immediately as the reversing threads underneath the head allow the screw to sink into the drywall board without any problems. The unique tightening features of the screw have been achieved by providing the screw with a cutting drill tip, as well as with oblique and longitudinal flanks between the threads. This provides the following benefits:

- Less risk of cracks in wood.
- Lower torque when tightening.
- Less screwing time.

Track type bit: TX 10.

Material: Case hardened steel.

Coating: ZPY = Zinc-plated 5 my yellow, WHITE = white lacquered RAL 9010, for indoor use.
