Panel screw (A4 stainless) for wood stud

V/S/B
VÄSTSVENSK BYGGSKRUV AB

Function: Patented design with sharp tip and threads adapted for anchoring in wood. The threads immediately grip and tighten the screw to the panel. The threads underneath the head fix the decking while the grooves underneath the head sink the screw. Suitable for installing panel, fences etc. The screw meets the requirements of the AMA Hus 24 HSD.16 for the installation of panel. The unique tightening features of the screw have been achieved by providing the screw with a cutting drill tip, as well as with oblique and longitudinal flanks between the threads. This provides the following benefits:

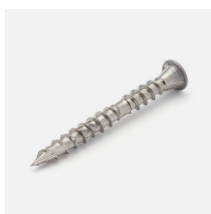

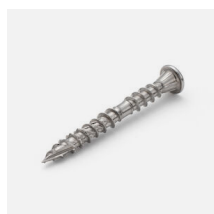

- Less risk of cracks in wood.
- Lower torque when tightening.
- Less screwing time.

Track type bit: TX 20.

Material: Stainless steel (A4).

Installation instructions: The screw head should not be countersunk.
