

Function: Frame socket with milling function for frame attachment in wood, concrete, hollow block, lightweight concrete, lightweight clinker, and steel.

Material: Zinc.

Installation instructions: The frame socket is screwed into a 14 mm pre-drilled hole from the outside of the frame. If necessary, countersink the frame socket in the frame. Place the frame in the opening and screw out the frame socket against the substrate. Adjust the frame with an adjustment key so that the frame is level and plumb. Ensure that at least 15 mm of the frame socket's length is anchored in the frame. Anchor the sleeve with a screw suitable for the substrate. Cover the holes with caps.
